

LIFEVIZ® INFINITY: One system. Countless possibilities.

-> A portable imaging system for the face and breast

Portability

The only portable camera system capable of generating 3D images of the face and breast to simulate procedure outcomes and photo document before-after interventions without blocking an entire exam room with cumbersome equipment.

Accurate & Reproducible

With a simple switch of the button, dual beam pointers adjust to the distance ideal for face or breast applications without the need of a re-positioning device. In addition, the dual flash ensures reproducible lighting conditions over multiple visits and under varying conditions.

Quick & easy

In under three minutes, you can view and start to assess your patient's needs for their face or breast. The LifeViz® system has been developed with input from practicing physicians to ensure that it fits smoothly into an office's workflow and can be used by the office staff.

Differentiate your practice

Improve patient communication

Display procedure results

Convince & reassure

Increase patient conversions

Easy-to-use

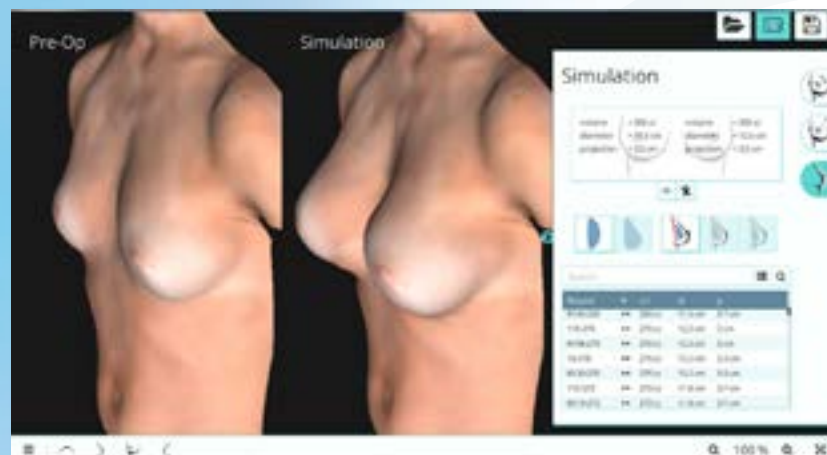

3D BREAST SHAPER MODULE to assess and simulate breast procedures

-> Communicate with patients and ease implant choice

Visualize an accurate 3D representation to help patients see their future outcomes.

Browse in a complete catalog to simulate realistic results.

Perform distance measures and the system automatically generates implant recommendations best suited to your patient's anatomy.

-> Obtain quick breast measurements

One simple click and you display the breast measurements.

Adjust your landmarks to adapt measurements to your patient's anatomy.

Adjustable landmarks

Measurements tool

3D FACE SHAPER, VIEWER & SKIN ANALYSIS MODULES for analysis and simulation

-> Assess skin conditions to make personalized treatment recommendations

Rank your patients against a reference population to evaluate their skin quality.

The report and 3D animations of specific areas provide reference tools to guide the physician and to communicate with the patient about the best aesthetic interventions.

Based on scores, recommend products and treatments by selecting them from your personalized catalog browser.

-> Simulate procedure results to align patient expectations with their anatomy

Reassure your patients and facilitate more comprehensive anti-aging treatments & harmonious outcomes.

-> Compare

Compare before/after treatments and display after results through multiple visualizations.

Improve your patient follow-up with a 3D photodocumentation that records volume changes after treatment.
