

USER-FRIENDLY 3D CAMERA
FOR AESTHETIC DOCTORS,
DERMATOLOGISTS AND
PLASTIC SURGEONS

3D

3D LifeViz[™]
mini

The most compact
3D system for skin
analysis & simulation

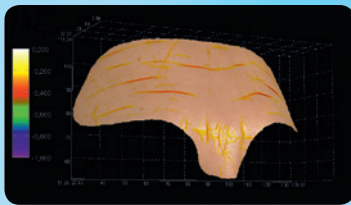

QUANTIFICARE 

THE 3D SKINCARE MODULE FOR SKIN EVALUATION

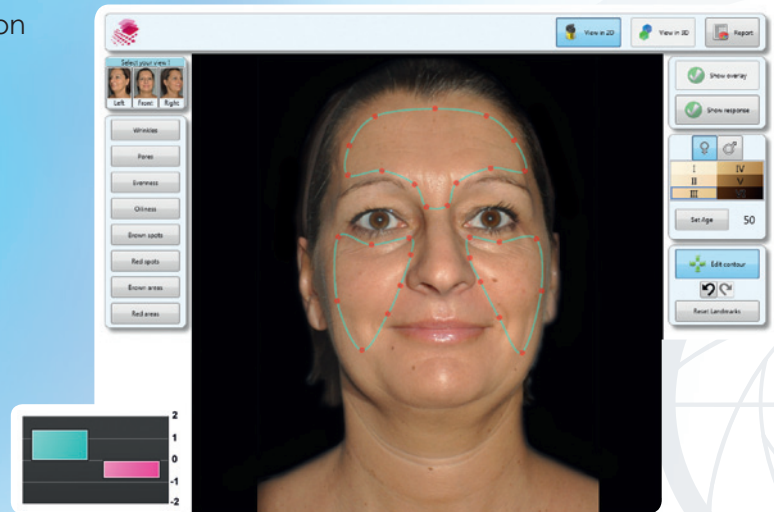

→ Quick & intuitive interface

With a single click, generate patient scores against a matching population for the following measurements:

- Wrinkles
- Oiliness
- Pores
- Evenness
- Red spots / Brown spots
- Red map / Brown Map

3D forehead analysis for wrinkles

Simple scores display

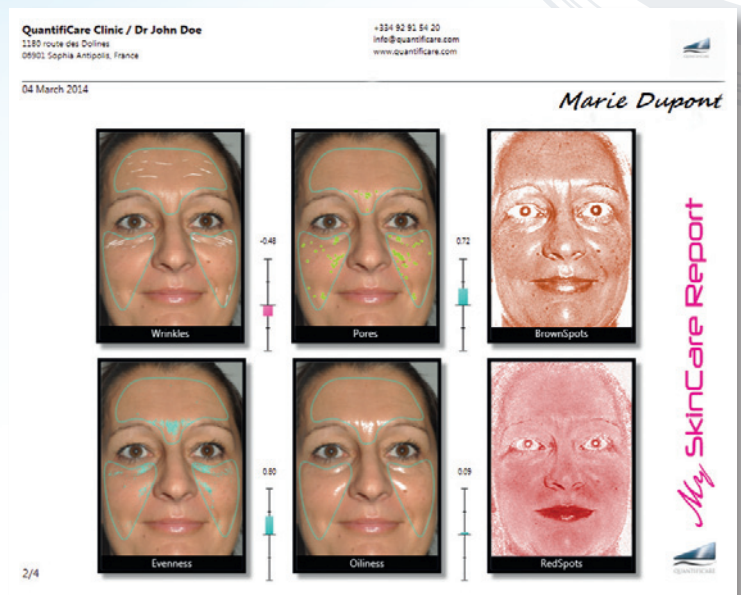

SkinCare Module Interface

→ Improve patient education and follow up by creating personalized reports!

The report and 3D animations of specific areas provide reference tools to guide the physician and to communicate with the patient about the best aesthetic interventions.

COMMUNICATION TOOLS:

Print, save and display patient files
(jpeg / animations / reports)

Photography

Quality images

Skin expertise

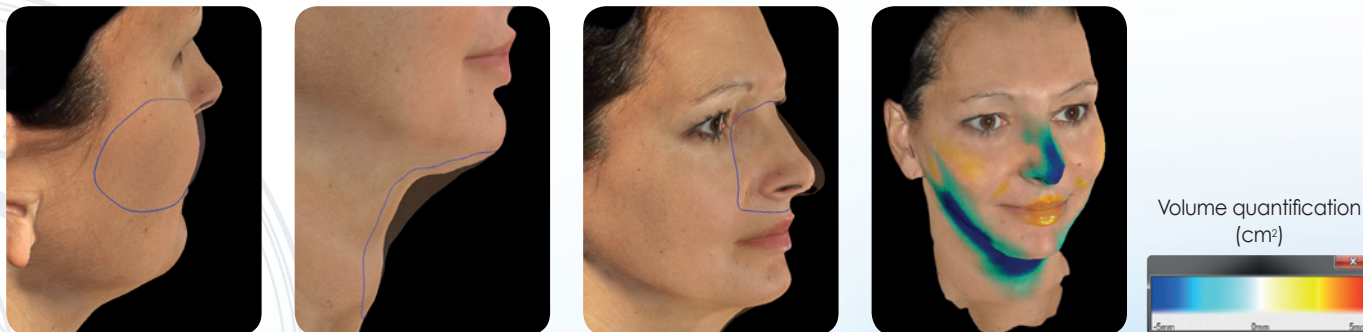

Simulation

easy-to-use

↘ THE FACE SHAPER MODULE FOR AESTHETIC SIMULATION

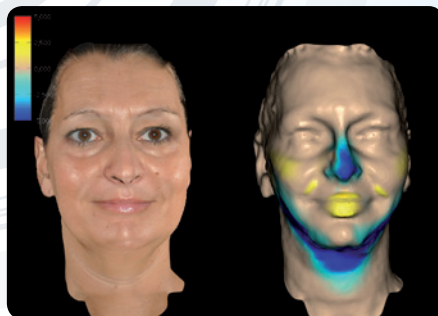

→ Simulate & decide treatments options

Reassure your patients and facilitate more comprehensive anti-aging treatments & harmonious outcomes.

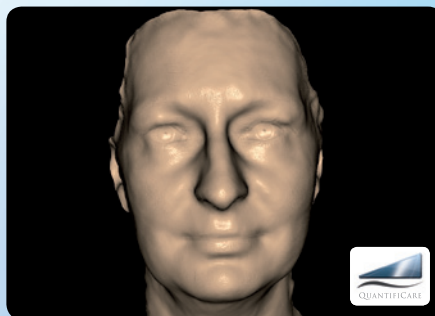

→ Assess patient conditions to manage their expectations

Compare before treatments, simulate possibilities and display after results through multiple visualizations.

Skin / Volume

Texture / Contour

Vascularization

Hyperpigmentation

“
*With the 3D LifeViz,
I can suggest the most efficient
treatments. The patients love it and
come back to me for further
treatments.*

Doctor Carmen Salvatore

”

SKIN EVALUATION EXCELLENCE

→ Optimized reproducibility

3D reconstruction is completed by 3D matching to offer greater accuracy. The LifeViz technology enables quantification of volume changes and detection of fine surface details.

→ User-friendly solutions

The LifeViz™ Mini is the only portable camera system capable of skin analysis and simulation. There is no need to block an exam room. Reproducible pictures are possible without repositioning systems, thanks to our dual beam pointers.

Less than three minutes are necessary from taking photos to assessing skin complexion. The three photos are automatically stitched and the patient's face is reconstructed in 3D.
